Professional Summary

Data Engineer with 4.5+ years of professional experience building scalable software solutions and data-driven systems. Hands-on experience designing and developing ETL/ELT data pipelines using Databricks, Apache Airflow, Python, SQL, dbt, Snowflake and AWS. Experienced in data ingestion, transformation, data modelling, quality validation, workflow orchestration, and automation across batch and event-driven workloads.

Key Career Accomplishments

- Integrated Docker into development workflows, enabling consistent deployments across environments.
- Engineered ETL pipelines for data ingestion, transformation, and storage, improving data accessibility and reliability for analytics.
- Implemented streaming and batch data processing solutions using tools like Kafka and Spark, supporting real-time and large-scale data workflows.

Skills

Programming & Query Languages: Python, SQL, C#, Java, JavaScript, TypeScript

Data Engineering Tools: Apache Airflow, dbt, Databricks, Apache Spark, PySpark, Snowflake

Cloud & Infrastructure: AWS (S3, RDS, EC2, CloudWatch, SQS, EventBridge), Terraform, Docker

Databases: Snowflake, PostgreSQL, MySQL, RDS, SQL Server

Engineering Practices: Workflow Orchestration, CI/CD, Infrastructure as Code, Automated Testing, Data Pipeline Monitoring, System Integration

Experience

Griffin Global Tech | United States – Data Engineer (May 2025 – Present)

- Designed and maintained scalable data pipelines using Databricks and PySpark for ingestion, transformation, and processing of large datasets across batch and real-time workloads.
- Utilized dbt (Data Build Tool) to develop modular, version-controlled transformations and deliver analytics-ready datasets for downstream reporting and analytics.
- Implemented Kafka-based streaming pipelines to continuously collect, process, and transform alarm data, supporting near real-time monitoring and analysis of operational events.
- Implemented AWS SQS and EventBridge-based CDC workflows to capture change events from Salesforce and trigger downstream processing and data execution.
- Integrated data from Salesforce and other operational sources, applying transformation, validation and data quality rules to maintain reliable analytical datasets.
- Deployed and managed cloud infrastructure using Terraform, enabling reproducible and automated provisioning of data and application resources.
- Leveraged AWS S3 and RDS for data storage and CloudWatch for logging, monitoring, and alerting to support reliable data pipeline operations.
- Built and optimized interactive Databricks dashboards to provide actionable insights for business and technical teams.

Dynasoft Business Solution | Kenya – Data Engineer (Sep 2023 – Apr 2025)

- Designed and developed Python and SQL based ETL/ELT pipelines using Apache Airflow for orchestration and dbt (Data Build Tool) for data transformation and validation.
- Built and managed Airflow DAGs for scheduled batch processing and event-driven workflows, implementing dependencies, retries, monitoring and logging and automated failure handling.
- Developed analytical data models and Snowflake data warehouses, including fact and dimension tables, star schemas and curated datasets for reporting teams.
- Integrated data from Salesforce, SQL databases, REST APIs and cloud services, applying transformation and data quality rules to produce reliable downstream datasets.
- Developed Python scripts to automate recurring data-processing tasks, file ingestion, validation, reconciliation, and operational workflows.
- Implemented dbt data quality tests and source validations to identify missing, duplicate, and inconsistent records before data was consumed downstream.

Skylab Systems Limited | Kenya – Junior Software Engineer (Aug 2022 – Aug 2023)

- Developed efficient and maintainable server-side logic and APIs using Spring Boot framework.
- Designed and optimized MySQL database schemas, ensuring data integrity and performance.
- Integrated Standard Bank with Rewards Management System, streamlining financial transactions.
- Fixed bugs and optimized backend code, improving stability and overall system performance.

Truweb Tech | Kenya – Software Engineer Intern (Jan 2022 – Jul 2022)

- Developed and maintained Android applications using Java and Kotlin.
- Integrated Google Maps and Firebase into Android applications.
- Consumed RESTful APIs developed using Spring Boot in Android applications.
- Designed and developed a food ordering application using Java and Firebase.

Certifications

- LinkedIn Certified: Cloud Computing for IT Pros
- JetBrains Certified: Java

Education

Dedan Kimathi University of Technology – Bachelor of Science: Computer Science
